		Up to 2", incl.	Over 2 to 3", incl	Over 3"
	1/16 thru 3/8	± 0.010	± 0.015	± 0.025

<b>Description</b>	A hollow, headless pin with chamfered ends, formed or wrapped from steel sheet to a diameter slightly greater than the basic. It is distinguishable from the slotted pin variety in that it has multiple walls.		
<b>Applications/ Advantages</b>	Upon installation, the pin diameters contract and press against the sides of the hole. This outward pressure holds the pin in place. The coiled pin is more flexible than the slotted variety making it preferable when used in softer materials. Coiled pins are easier to install than slotted pins and are superior in their ability to withstand vibration following installation.		
<b>Material</b>	<b>Steel</b>	<b>Stainless</b>	
	1070 - 1095 Steel	420 Stainless	303 Stainless
<b>Hardness</b>	<b>Stock Thickness Range:</b> Over 0.001 thru 0.010: Vickers 420 - 545 Over 0.010 thru 0.025: Rockwell 15N 82 - 86.4 Over 0.025 thru 0.050: Rockwell A 72 - 76.8 Over 0.050 thru 0.094: Rockwell C 43 - 52	<b>Stock Thickness Range:</b> Over 0.001 thru 0.010: Vickers 460 - 560 Over 0.010 thru 0.025: Rockwell 15N 83.5 - 86.9 Over 0.025 thru 0.050: Rockwell A 73.6 - 77.4 Over 0.050 thru 0.094: Rockwell C 46 - 53	Work hardened only
<b>Shear Load</b>	Spring pins shall be capable of withstanding the minimum double shear loads specified in the above table.		
<b>Plating</b>	See Appendix-A for plating information.
